MelaVite GL70PS30

Glycerol based liquid supplemental feed with added sugars for pigs

Application:

When feeding fattener pigs, to increase energy concentration of rations, to achieve better liveweight gain and feed conversion.

A syrup containing different sugars (glucose, fructose) supplemented with gycerol providing liver protection altogether can improve efficiency of digestion and significantly improves dry matter intake.

For lactating sows, especially after farrow, for milk production and improving animal condition, and to supply energy needed for re-oestrum.

For improved energy intake to ensure better fertility during preparing for insemination.

Guaranteed values	*In the original material*
Glycerol content (80%)	min. 70,0%
Moisture	max. 35,0%
MONG (further non-glycerol organic matter) 100%-glycerol-moisture-methanol-ash	max. 3,0%
Total sugars*	11,0-12,0%
Methyl alcohol	max. 0,3%
Further nutrient content values	
ME (calculated)	12,14 MJ/kg d.m.
DE (calculated)	12,40 MJ/kg d.m.

**according to method MSZ6830/26:1987*

Ingredients: feed grade glycerol, water solution of confectionery byproduct

Appearance: Dense, brown, transparent, sweet liquid.

Rationing:

Fattener pig: 3-5% of rations

Sow: 70-100 gram/animal/day

- Blended in feed.
- Added to drink water.

Storage: Keep at a dry, cool place in closed tank
